

CS375 Homework Assignment 2 (40 points)

Due Date: January 28, 2025

(The red boxes are text boxes. You can put your answers into the boxes directly)

1. For each of the following regular expressions find a language (i.e., a set of strings) over $A = \{a,b,c\}$ that can be represented/described by that expression. (8 points)

a. $ab^* + a^*bc$ b. a^*bbbc^*

a.

b.

2. Find a regular expression to describe the following language. If it has no regular expression, say so and explain why.

$\{a, b, bac, bc, b^2ac^2, bc^2, \dots, b^nac^n, bc^m, \dots\}$ (2 points)

3. A regular expression for the language over the alphabet $\{a, b\}$ with each string containing exactly one 'ab' substring is $b^*a^*abb^*a^*$. Use this result to find regular expressions for the following languages

a. a language over the same alphabet with each string containing two 'ab' substrings. (2 points)

b. a language over the alphabet $\{a, b, c\}$ with each string containing exactly one 'abc' substring. (6 points)

4. If a regular expression for the language over the alphabet $\{a, b\}$ with no string containing the substring aa is $(b+ab)^*(\Lambda+a)$, then what is the regular expression for the language over the alphabet $\{a, b, c\}$ with no string containing the substring aaa ? (4 points)

5. The following proof shows that

$$b(a + b)^* + bb(a + b)^* + bbb(a + b)^* = b(a + b)^*$$

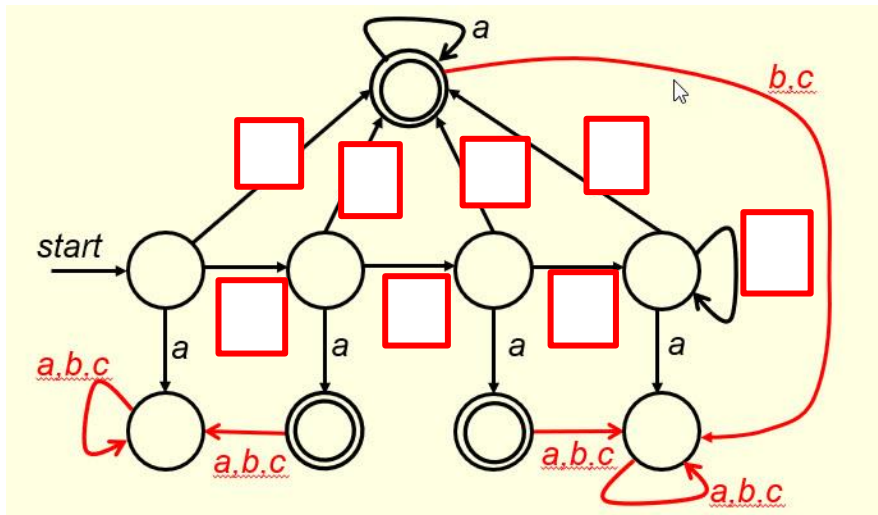

Put the reason for each step in the blank on the right-hand side of that step. If an example in the notes can be used for a step, quote that example. (5 points)

$$\begin{aligned}
 & b(a+b)^* + bb(a+b)^* + bbb(a+b)^* \\
 &= b(a+b)^* + (bb+bbb)(a+b)^* \quad \boxed{} \\
 &= b(a+b)^* + b(b+bb)(a+b)^* \quad \boxed{} \\
 &= b(a+b)^* + bb(a+b)^* \quad \boxed{} \\
 &= (b+bb)(a+b)^* \quad \boxed{} \\
 &= b(a+b)^* \quad \boxed{}
 \end{aligned}$$

6. Fill out the blanks in the following figure to make it a DFA that recognizes the expression $ab + bb^*a$. (5 points)

7. Fill out the blanks in the following figure to make it a DFA for the expression $b^*ac^* + bbc + bc$ (4 points)

8. Fill out the blanks in the following figure to make it an NFA for the expression

$$a^* + b^*a^* + b(a+b)^*$$

If it is possible, simplify the given expression first. (4 points)

- Solutions must be typed (word processed) and submitted to Canvas both as a pdf file and a word doc (or docx) file before 23:59 on 01/28/2025.
- Please name your files the following way:

CS375_2025s_HW2_LastName.docx / CS375_2025s_HW2_LastName.pdf
